

AI: Mastering the Shell with GitHub Copilot CLI

I committed locally but haven't pushed yet. I want to combine the last two commits into a single commit with a new message.

Copilot response:

```
git rebase -i HEAD~2
```

Accuracy Ranking: 9 / 10

Justification: The AI suggested the correct interactive rebase command to combine the last two commits. It efficiently provides the proper workflow and solves the problem clearly, which is exactly what was requested.
